

# Agenda

What is .NET(Dot Net)

What Can I build with .NET?

History

.NET Core

Desktop Development with .NET

Web Development with ASP.NET

Mobile Development with .NET

**Developer Tools** 

Resources to study

#### Web

Build web apps and services for Windows, Linux, macOS, and Docker.

### Mobile

Use a single codebase to build native mobile apps for iOS, Android, and Windows.

### Desktop

Create beautiful and compelling desktop apps for Windows and macOS.

### Microservices

Create independently deployable microservices that run on Docker containers

### Gaming

Develop 2D and 3D games for the most popular desktops, phones, and consoles.

### **Machine Learning**

Add vision algorithms, speech processing, predictive models, and more to your apps.

### Cloud

Consume existing cloud services, or create and deploy your own.

### **Internet of Things**

Make IoT apps, with native support for the Raspberry Pi and other single-board computers.

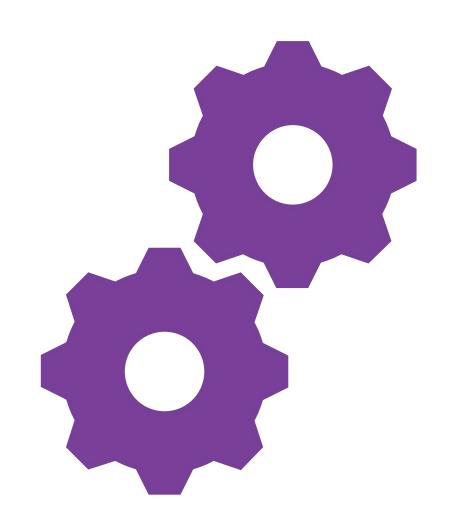

## History of .NET Framework

.NET Core – Free. Crossplatform. Open source

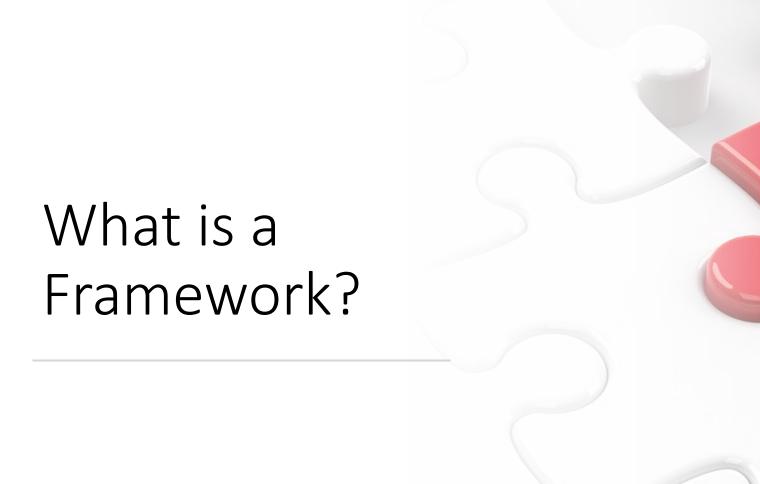

- "We dropped 'Core' from the name to emphasize that this is the main implementation of .NET going forward"
- - Microsoft

### .NET Schedule

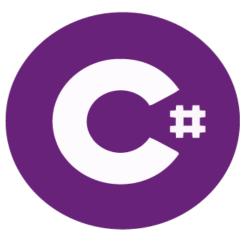

# What is open source?

```
Tror_mod.mirror_object
 eration == "MIRROR_X":
irror_mod.use_x = True
urror_mod.use_y = False
lrror_mod.use_z = False
operation == "MIRROR_Y"
Irror_mod.use_x = False
lrror_mod.use_y = True
lrror_mod.use_z = False
 Operation == "MIRROR_Z";
 rror_mod.use_x = False
 rror_mod.use_y = False
  rror_mod.use_z = True
  election at the end -add
   ob.select= 1
  r ob.select=1
  text.scene.objects.action
   Selected" + str(modified
  rror ob.select = 0
  bpy.context.selected_obj
  rta.objects[one.name].sel
  Int("please select exactle
    OPERATOR CLASSES ----
    pes.Operator):
   X mirror to the selected
  ject.mirror_mirror_x"
 ontext):
ext.active_object is not
```

# .NET Programming Languages

simple, modern, objectoriented, and type-safe

makes it easy to write succinct, robust, and performant code.

simple syntax for building typesafe, object-oriented apps.

# Desktop Development with .NET

Windows Forms (WinForms)

Windows Presentation Foundation (WPF)

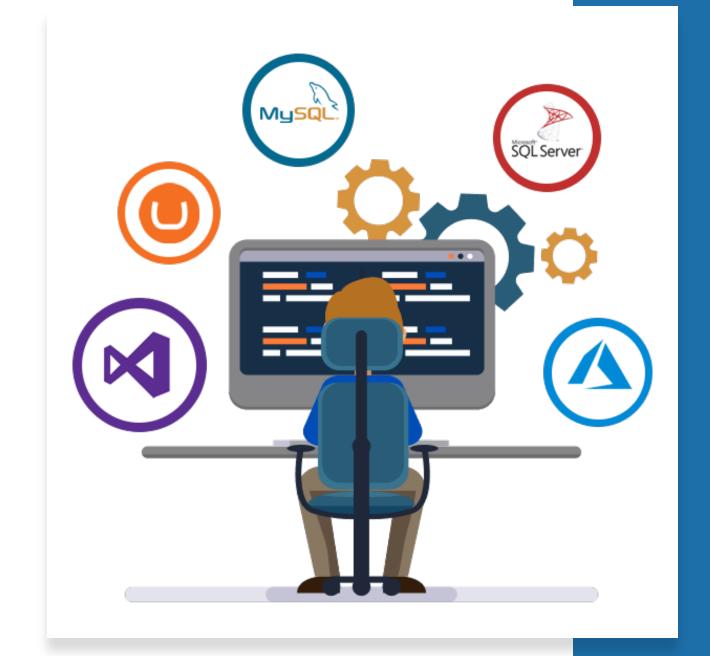

Universal Windows Platform (UWP)

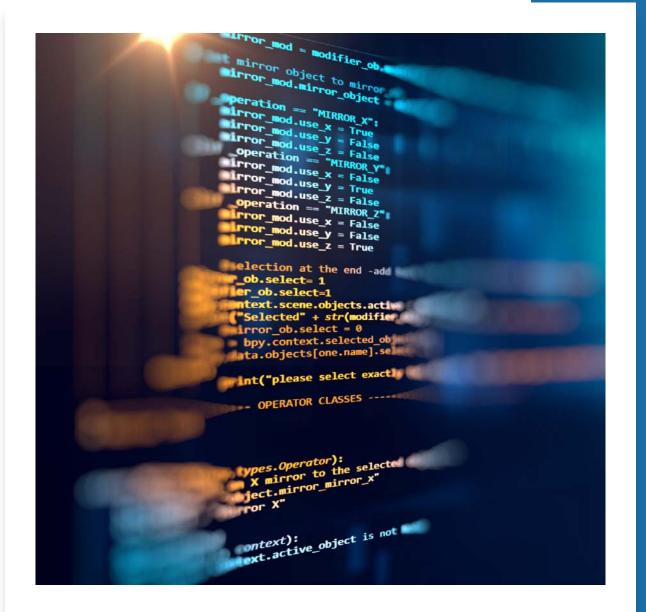

# **ASP.NET**

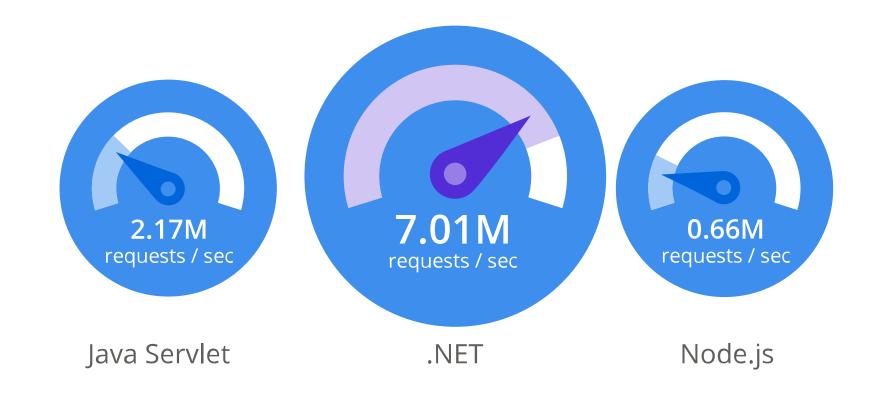

Free.
Cross-platform.
Open source

### Benefits of ASP.NET

- Web Apps
- APIs
- Microservices
- Fast and scalable
- Build secure apps
- Blazor
- Active community and open-source

Performance of ASP.NET

Data sourced from official tests available at <u>TechEmpower Round 20</u>.

Dell R440 Xeon Gold + 10 GbE

**Blazor** - Build client web apps with C#

```
@page "/counter"
                                                                          \equiv
                                             MyBlazorApp
 <h1>Counter</h1>
                                             Counter
 <h3>Current count: @currentCount</h3>
                                             Current count: 0
 <button class="btn btn-primary"</pre>
   @onclick="IncrementCount">
                                              Click me
 Click me
 </button>
∃@code {
     private int currentCount = 0;
     private void IncrementCount()
          currentCount++;
```

# Example of using Blazor

### Xamarin

- Mobile Apps
- Cross-platform
- Tooling
- Ecosystem
- Open-source and free

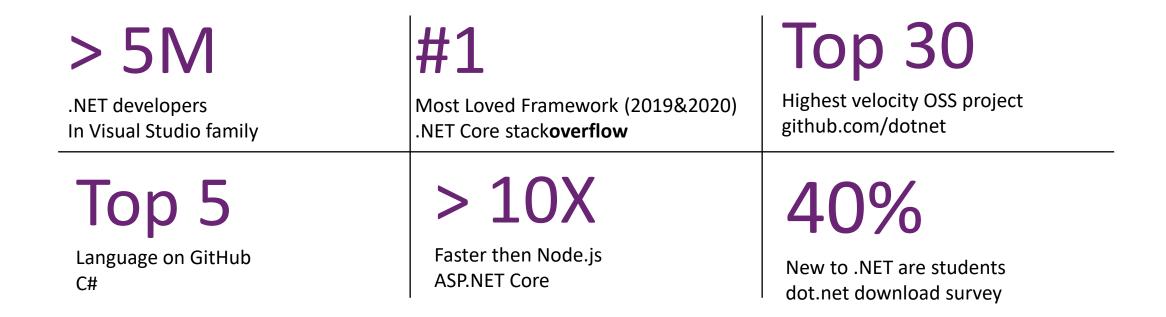

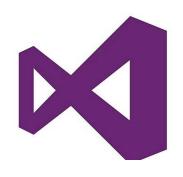

# .NET ecosystem momentum
